动态规划: 673. 最长递增子序列的个数

代码:

```
1 class Solution {
public:
       int findNumberOfLIS(vector<int>& nums) {
            int n = nums.size();
           vector<int> len(n,1);
           auto count = len;
           int maxlen = 1;
           int maxcount = 1;
           for(int i = 1; i < n; i++)
10
11
                for(int j = 0; j < i; j++)
                {
                    if(nums[j] < nums[i])</pre>
13
14
                         if(len[j] + 1 == len[i]) count[i] += count[j];
15
                         else if(len[j] +1 > len[i])
16
                         { len[i] = len[j] + 1;
17
                           count[i] = count[j];
18
19
                         }
                    }
20
21
                if(maxlen == len[i]) maxcount += count[i];
22
                else if(maxlen < len[i])</pre>
23
                { maxlen = len[i];
24
                   maxcount = count[i];
25
26
27
            return maxcount;
28
29
           // int maxnum = dp[0];
30
           // int count = 1;
31
           // for(int i = 1 ;i < n;i++)
32
           // {
33
           //
                   if(dp[i] == maxnum)
34
            //
35
            //
                       count++;
            //
                   else if(dp[i] > maxnum)
38
```
